SLAM has spent over forty years working alongside sport's highest achievers. And it does not stop here.

The bond between SLAM and the sea and sailing dates back to its foundation and developed rapidly, thanks to the use of innovative and high-performance materials, such as the iconic Mickey Bear fleece.

It was worn for the very first time at the Moscow Olympics in 1980, by Dodo Gorla and Alfio Peraboni, winners of the bronze medal in the Star class.

In the early 1990s, SLAM began collaborating with one of the world's most prestigious yacht clubs: the Yacht Club Costa Smeralda. SLAM is still the official licensee of the Maxi Yacht and Swan Cup regattas.

In 2000, SLAM was the supplier of the Italian Sailing Federation at the Sydney Olympics and shared in the success of the Italian athletes and the gold medal of Alessandra Sensini in windsurfing. In 2005, Russell Coutts, New Zealand Olympic yachtsman and five-time winner of the America's Cup, became a SLAM testimonial and advisor in the development of new, high-quality technical garments. 2010 saw victory in the America's Cup with BMW ORACLE RACING. Another international victory came two years later, with the Groupama of Franck Cammas in the Volvo Ocean Race.

SLAM has been a partner of the Yacht Club de Monaco for over 20 years and collaborates on the projects of the Monaco Sports Academy, dedicated to athletes in

all water sports. SLAM has been the Gold Sponsor five times of the Barcolana regatta, the Guinness world record holder for number of participants. In the most recent partnerships, SLAM is the technical partner of the Young Azzurra team, a project started in 2020 by the Yacht Club Costa Smeralda to support talented young Italian sailors.

In July 2021, the VAM Investments holding company, controlled by Francesco Trapani and headed by Marco Piana, acquired the SLAM brand and chose as the CEO the Olympic sailor Enrico Chieffi, who also joined as an investor.

Enrico Chieffi has a long and extremely successful international sporting career behind him: he has won two world championships in the 470 (1985) and Star (1996) classes and was the navigator on the Moro di Venezia in the 1992 America's Cup, as well as representing Italy at the 1984 and 1996 Olympics.

Enrico is also a highly experienced and successful manager in the luxury shipyard industry. He was, in fact, the CEO and VP of Nautor Swan, a leader in luxury boat building, for around 14 years.

**SLAM IS THE OFFICIAL APPAREL SUPPLIER
OF EMIRATES TEAM NEW ZEALAND,
DEFENDER OF THE AMERICA'S CUP.**

SLAM has been chosen as the official apparel supplier of the New Zealand team, which is preparing to defend the America's Cup in October 2024. *Emirates Team New Zealand* has already successfully defended the America's Cup in Auckland in 2021, and had previously won the world's oldest sports trophy in 1995, in 2000 and then again in 2017. *Emirates Team New Zealand* will defend the America's Cup against the winners of the Challenger Series, in which five highly technically accomplished teams will take part: the British INEOS Britannia team, headed by multiple Olympic champion Sir Ben Ainslie; the Swiss Alinghi Red Bull Racing team, two-time winner of the America's Cup; the Luna Rossa Prada Pirelli team, with Max Sirena as team director and skipper; the US American Magic team, with Olympic gold medallists Tom Slingsby and Paul Goodison; the French K-Challenge team, headed by Stephan Kandler. Grant Dalton, CEO of *Emirates Team New Zealand*: "SLAM has shown that it has the clear and purposeful strategy of becoming one of the world's leading technical sailing apparel brands. Here at *Emirates Team New Zealand*, we are all keen to start working alongside it to achieve this objective. We are a team of over 100 people covering a range of essential roles, from engineering to construction of the yachts, and we have to work together to win the America's Cup. Our philosophy is to involve all our partners and that means SLAM as well, with its commitment to manufacturing high-quality apparel".

The new partnership, in which SLAM will supply technical apparel to *Emirates Team New Zealand*, will be the start of a phase of close cooperation in the development of materials and in design of the end product. The replicas of the garments designed for and worn by the team defending the America's Cup will have the same technical features and will be marketed worldwide. Enrico Chieffi, CEO of SLAM: "It is truly an honour to sign this agreement and thus join the campaign of *Emirates Team New Zealand*. We will do everything in our power to contribute to its defence of the America's Cup. Grant Dalton and I have known each other for many years. There has always been a relationship of mutual understanding and respect, whenever we have been involved together in the sailing world's most prestigious events, first as athletes and then as managers. SLAM has played a central role in sailing for over 40 years. Our aim now is to consolidate our position as one of the sailing world's leading technical apparel brands. This partnership marks a major step in that direction. The technical apparel of *Emirates Team New Zealand* will be the result of close cooperation in the development of materials and in design of the products," concludes Enrico Chieffi, world champion in the 470 and Star classes, two-time Olympian and tactician of the Moro di Venezia, the Italian challenger in the 1992 America's Cup.

PARTNERSHIPS

Slam is the official supplier and technical sponsor of the **Italian Sailing Federation**. Less than three months after presentation of the new corporate structure, Slam has been awarded the contract for supply of the technical clothing of the Federation. The aim is to listen to the needs of athletes and to devise custom-made and high-quality products for them.

The next step was the agreement with the **Optimist Class**, the single-handed sailing dinghy on which children can start sailing and prepare to become tomorrow's champions.

Dream Team. A great deal of attention has been focused on training the team of athletes and sailors, the most important of whom are young Olympians such as *Alice Linussi* and *Andrea Totis* in the 470 mixed class, the Paralympian *Davide Di Maria* in the 2.4 class and the Nacra 17 super champions *Ruggero Tita* and *Caterina Banti*, gold medallists at Tokyo 2020. They are all essential resources in research and development into technical products. They are joined by such well-known names as former Olympian Tommaso Chieffi, who has also participated in the America's Cup and in the most prestigious international regattas, but also influencers such as the "Pirates of Dreams", Federica Chiesa and Edoardo Marchese: sports enthusiasts whose passions range from sailing to paragliding, climbing to downhill.

Yacht Club de Monaco. One of the world's most prestigious yacht clubs. Its elegant club house, designed by Lord Norman Foster, resembles a yacht, with its decks formed of terraces overlooking the sea, and it has a sustainable design that uses renewable energies. SLAM has been a technical partner of the Club for over thirty years, supporting its competitive sailing activities and sailing calendar.

Yacht Club Costa Smeralda organises international regattas, including world championships, with specific experience in the super yacht and maxi yacht classes. SLAM is the technical partner of the Yacht Club and the *YCCS Sailing School*, and is also the official licensee of the *Maxi Yacht* and *Swan Cup* trademarks.

ARCA SGR. Fast and Furio Sailing Team: a collaboration based on a shared passion for the sea and for racing. The crew of the 100' ARCA SGR is formed of sailing champions, experienced professionals and young talents from the Olympic classes. The packed schedule of regattas offers SLAM a unique opportunity for dialogue, research and innovation of its technical apparel, used in the various regattas in all kinds of sea and wind conditions.

The **Leon Pancaldo**, an 18.50-metre ketch designed by Studio Brenta in the 1980s and restored by SLAM through major renovation work, is now a "training ship" and hosts sailing courses organised by SLAM for students of nautical institutes, with the aim of encouraging young people to approach sailing and of teaching them how to sail.

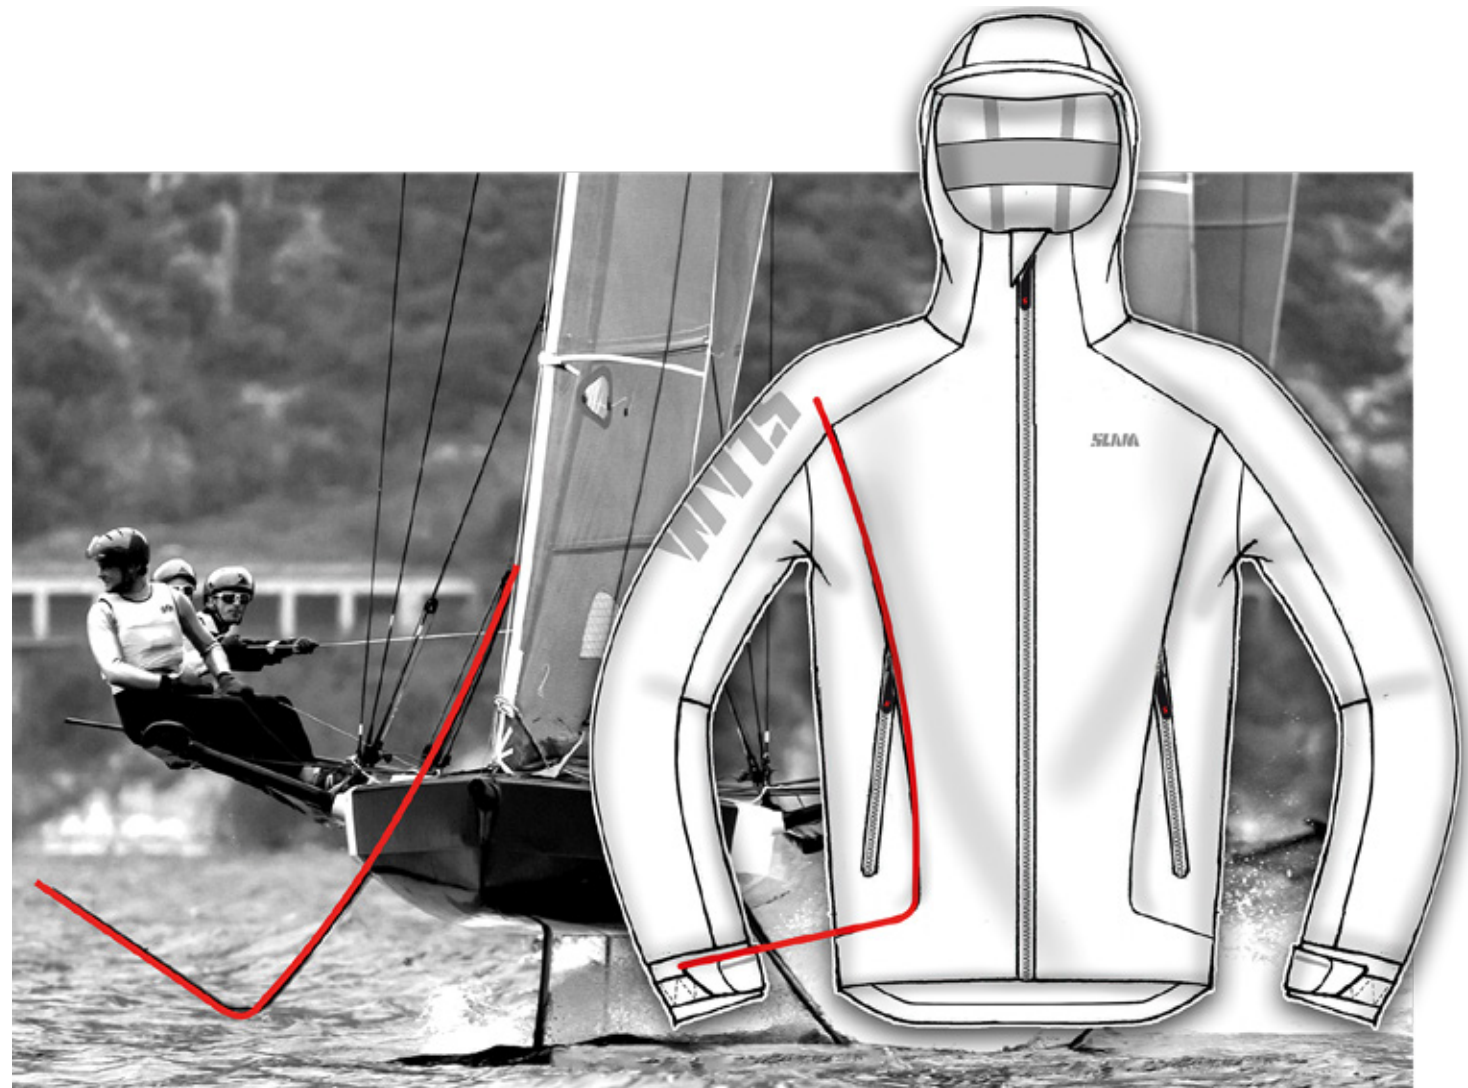

With the support of the **Menkab il Respiro del Mare Association**, the students learn how important it is to respect the marine environment and how to protect its fragile ecosystem. The Leon Pancaldo also plays a fundamental role in the social and healthcare rehabilitation activities organised by the "*Il Barattolo*" Voluntary Association and "sea trip" projects are performed in collaboration with the Asl 2 Savona local healthcare authority for the residents of psychiatric communities and patients assisted by the Department of Mental Health.

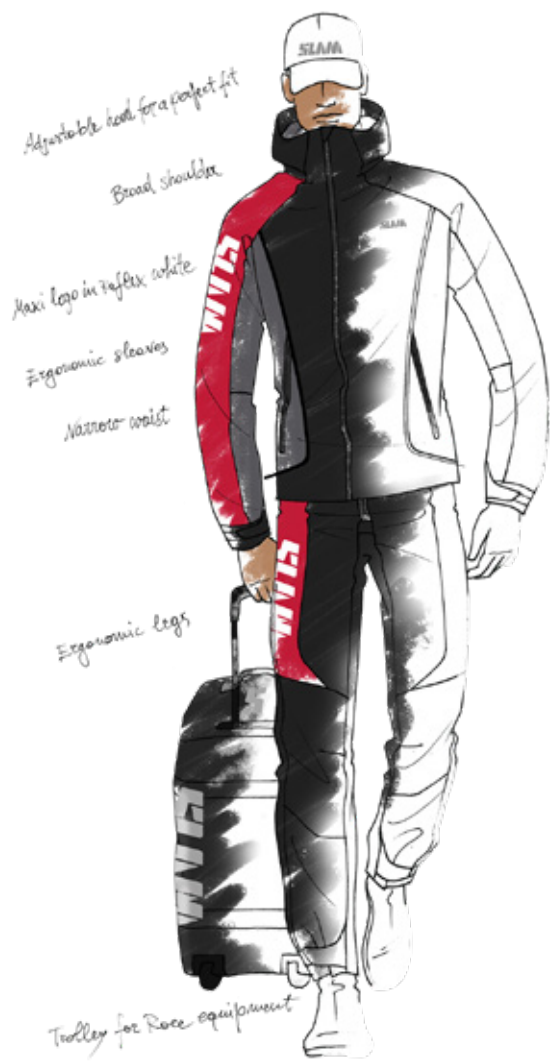

CONCEPT

The Foil Collection

There is an increasing new trend in the sailing world towards fast and flamboyant boats. Foiling boats are the future and the revolutionary 'flying' yachts of the 36th America's Cup are opening up a whole new world.

We are aware of this major revolution and it fascinates us, so we used the design of these high-performance boats as the inspiration for a new range of clothing with an identifiable but elegant style, comfortable and highly competitive in terms of performance and choice of materials.

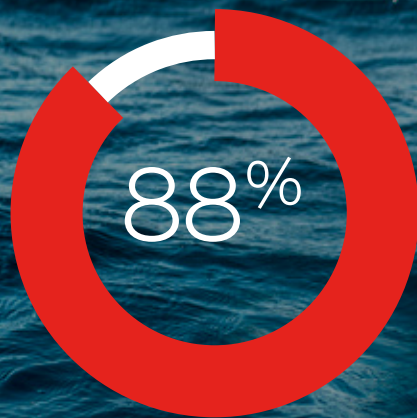

SUS TAIN ABI LITY

SLAM's commitment to sustainable production is serious, tangible and constant. Over 40% of our articles have at least one sustainable component.

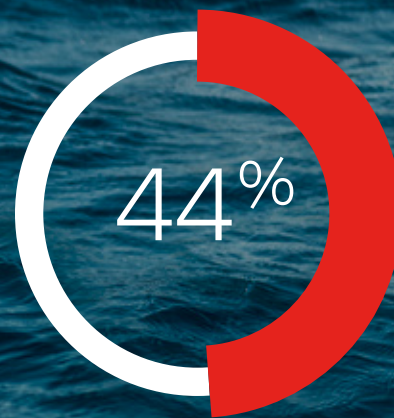

The cotton used for our t-shirts, polo shirts and sweatshirts comes from organic crops that reduce the environmental impact and the need for energy resources. We have decided to eliminate garment dyeing and thus have considerably reduced water consumption and pollution. Our dyeing plants operate in full compliance with the highest standards, with use of certified dyes and the best management of waste water.

Most of the fabrics used to manufacture our outerwear contain polyester and nylon produced with fibres obtained from recycling plastic bottles, fishing nets and industrial waste, and the same goes for the linings and padding. Everyone knows that one of the most hazardous and invasive sources of water pollution is the release, during washing, of microplastics that then also enter the food cycle. SLAM is determined to reduce this problem. Innovative materials with biodegradable microfibre components that dissolve in the environment in 90 days are currently being studied and our fleeces are destined to become more environmentally-friendly in the future. Our suppliers are all certified, as a guarantee of environmental and social sustainability. The number of certified European suppliers is also increasing. Transport has a major environmental impact for the planet and SLAM is therefore also working to reduce the distance between the place where the garment is manufactured and the end consumer.

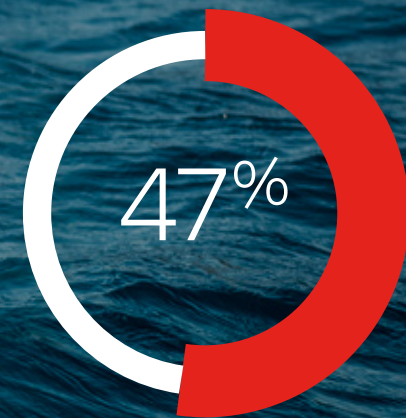

**The SLAM
commitment**

88% of our articles use organic cotton or are developed according to responsible parameters of saving water resources.

44% of our articles use recycled polyester

47% of the articles/colours proposed in this collection are manufactured with recycled or organic materials

ORGANIC COTTON

Sustainable fabric

Organic cotton is the environmentally-friendly alternative to traditional cotton. It is grown using methods with a low environmental impact and organic production systems are used to fertilise the ground, thus eliminating the use of harmful pesticides and chemical fertilisers that persist in both the environment and in the cotton itself. Chemical compounds remain in textile fibres even after repeated washes and can pollute water. With organic cotton, the risk of allergies and rashes is also reduced. Organic cotton production is certified by third-party entities (GOTS), who check the virtuous cycle of production and use of seeds that are NOT genetically modified (GMO).

Production of organic cotton is increasing rapidly every year and it is grown in 22 countries worldwide. The main producers are India, China, Turkey and the United States.

Several reasons why organic cotton is sustainable and environmentally-friendly:

- it respects the environment and fights climate change
- no pesticides or harmful chemicals are used
- it does not pollute the water
- it reduces the quantity of water and energy needed for production, thus contributing to a reduction of global warming
- it promotes social justice

Fabrics from recycled raw materials

While plastic is becoming one of the most serious problems for the planet for some, for others it is an incredible resource on which to base the development of environmentally-friendly projects.

Recycling means saving raw materials, energy and water and reducing greenhouse gas emissions.

Technology has now made it possible to obtain state-of-the-art textile fibres using both pre-consumer and post-consumer plastic waste. A complex chemical and mechanical process is used to turn plastic bottles, fishing nets and industrial waste into flakes, which are then melted into granules, extruded into fibres and spun. Research has demonstrated that production of fibres from post-consumption recycled waste requires 75% less water and 47% less energy and produces 55% less emissions than fibres made from the original, petroleum-based raw material. In order to reduce the environmental impact, SLAM is committed to making increasing use of recycled materials on its clothing, whether for the outer layers, linings or padding.

PRO

collection

The garments are designed for professional use and guarantee both safety and performance. They are manufactured in state-of-the-art materials, tested by professional sailors, and satisfy both the more demanding needs of competitive sailors and the needs of amateur sailing enthusiasts.

Dermizax™ HB

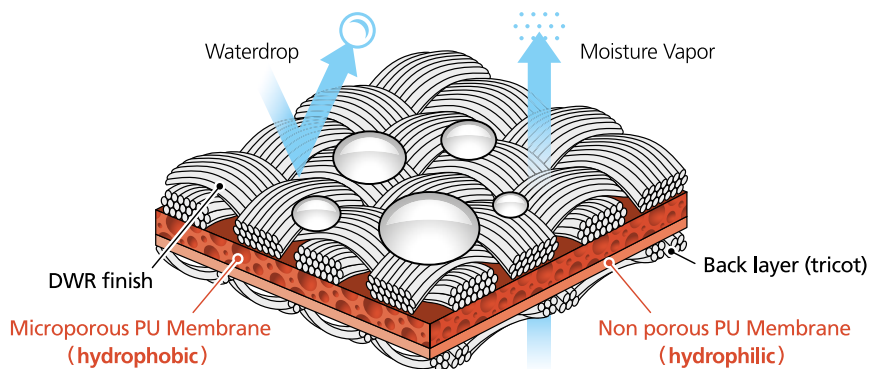

Waterproof Breathable Fabric

Hybrid version

Designed with a combination of microporous and non porous membrane. This version of Dermizax™ delivers our highest level of water protection. Dermizax is a trademark of Toray Industries, Inc.

-Toray Industries, Inc. -

This is a highly waterproof and breathable three-layer fabric. The outer fabric is extremely resistant 100% nylon, but still has a pleasant natural feel. The Dermizax HB "hybrid" membrane combines the benefits of microporous membranes with those of solid ones, for premium-level performances, designed specifically for sailing:

- Extreme waterproofness, with a water column of over 30,000 mm
- Breathability and resistance to condensation of over 8,000 gr/m²/24H
- Performance maintained over time, even in conditions as difficult as those of the open sea

The fabric has special finishes for a long-lasting water-repellent effect. It has been dyed with professional dyes, which also guarantee high light fastness.

POLARTEC®

ALPHA®

Polartec® Alpha® is the latest evolution in the synthetic insulation sector and has been created to have a greater level of insulation for the sudden and extreme temperature changes that occur in stop & go conditions of physical activity.

Alpha® is an “active” padding created to produce constant heat without affecting breathability during physical activity, as it adjusts comfort in changing conditions. It is extremely resistant and stable, allowing it to be combined with fabrics that have more open constructions, such as meshes, and thus creating air-permeable clothing. This air exchange technology creates a long-lasting and constant comfort, as the air flow circulates inside the fabric and therefore rapidly removes body humidity, making Polartec® Alpha® perfect for a broader range of sporting activities than traditional insulation.

It offers an extraordinary combination of heat, lightness and breathability, with an extra-soft feel and double the breathable effect. The drying times are also 60% faster than other insulating materials. It actively releases excess body heat before this creates “saturation” and therefore perspiration and discomfort. It is formed 55% of recycled fibres.

Benefits

- Maximum breathability – double compared to other types of padding
- Extreme control of heat
- Extremely lightweight – heat without weight
- Compressible - Packable
- 60% faster drying - quick-drying
- Easy care

GRAPHITE

GRAPHENE

THE MATERIAL THAT WILL CHANGE THE FUTURE

Graphene is considered to be one of the most innovative materials of the moment and is formed of a single layer of carbon atoms that arrange naturally into a honeycomb shape. Graphene has the thickness of an atom and the hardness of a diamond.

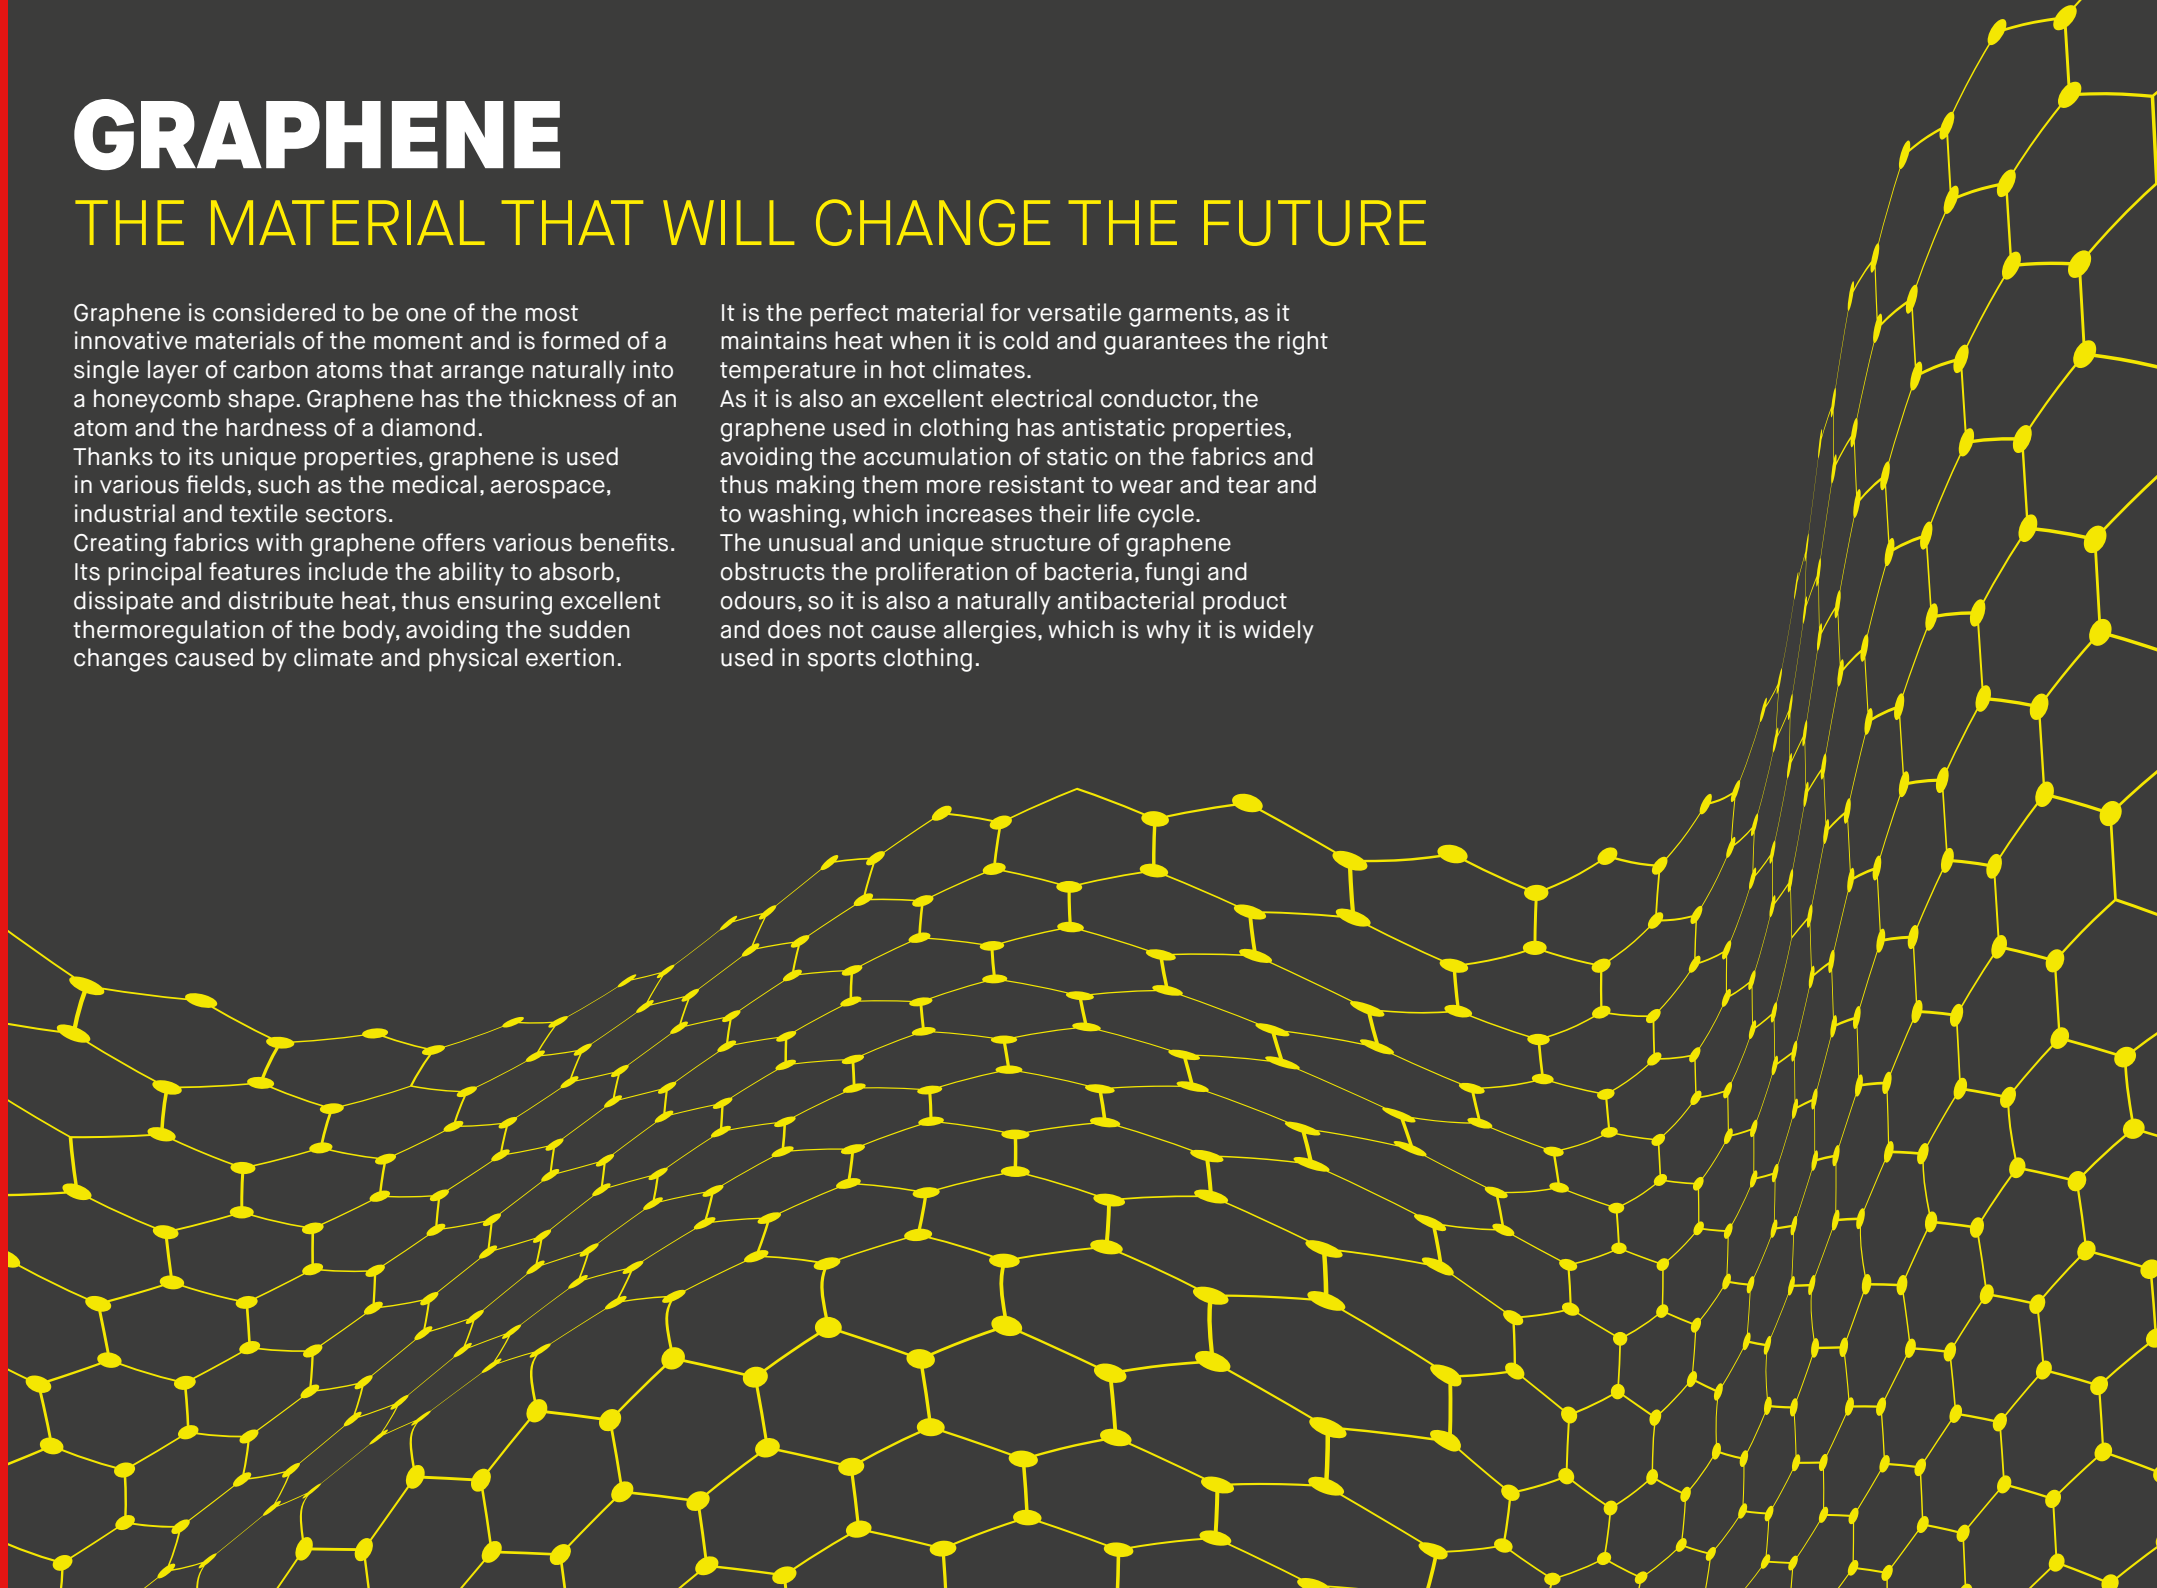

Thanks to its unique properties, graphene is used in various fields, such as the medical, aerospace, industrial and textile sectors.

Creating fabrics with graphene offers various benefits. Its principal features include the ability to absorb, dissipate and distribute heat, thus ensuring excellent thermoregulation of the body, avoiding the sudden changes caused by climate and physical exertion.

It is the perfect material for versatile garments, as it maintains heat when it is cold and guarantees the right temperature in hot climates.

As it is also an excellent electrical conductor, the graphene used in clothing has antistatic properties, avoiding the accumulation of static on the fabrics and thus making them more resistant to wear and tear and to washing, which increases their life cycle.

The unusual and unique structure of graphene obstructs the proliferation of bacteria, fungi and odours, so it is also a naturally antibacterial product and does not cause allergies, which is why it is widely used in sports clothing.

MERINO T-SHIRT

SLAM

Merino wool is a particularly fine wool, with an extremely thin fibre (20 micron). It is highly flexible and soft to the touch and therefore does not irritate even the most sensitive skin. Its softness is down to the numerous "curls" on the fleece of Merino sheep, which act like air chambers to make this wool an excellent natural thermal insulator.

However, Merino wool is not just ideal for use in the winter, as its fibres absorb body humidity naturally and expel it towards the outside, leaving a pleasant sensation of coolness.

The bacteriostatic characteristic given by its scaly surface is accompanied by "keratin", a basic protein present in Merino wool fibres that prevents the formation of unpleasant odours by absorbing body vapour and preventing it from condensing into sweat.

Merino wool does not have the electrostatic effect of synthetic fibres and is naturally biodegradable. This fibre can also absorb humidity up to one third of its own weight without becoming damp to the touch.

All these features make Merino wool the ideal material for the best *base layers* for more dynamic sports, by imitating the natural process of layering present on the sheep themselves.

In the summer, they grow a light and breathable fleece that provides insulation against extreme heat, whereas in winter they have a layer of longer and thicker wool that protects them against the cold.

The Merino wool used by SLAM, which is blended with 100% recycled polyester, making it more stable and easier to care for, comes from animals bred with cruelty-free processes and has undergone an Ecofriendly Chlorine-free treatment that makes it Easy-care.

THE LIGHTEST FIBRE

Dryarn® is an innovative polypropylene microfibre created from the tradition and experience of Aquafil. It is the world's lightest textile fibre, as well as being water-repellent, breathable, bacteriostatic and dermatologically tested. All these features make it ideal for technical sports clothing and introduce a new concept of comfort. Its extreme lightness, combined with a higher thermal insulation than wool, means that fewer and lighter layers of clothing can be worn, allowing greater freedom of movement. The "natural" characteristics of Dryarn® allow perspiration to be transferred to the outside and keep the skin dry at all times. In a hot climate, Dryarn® dries rapidly and allows the body to perform the natural process of evaporation that cools it. In a cold climate, it retains heat, due to the ability to keep the fabric and the skin dry.

DRYARN® IS THE LIGHTEST FIBRE EXISTING IN NATURE

DRYARN®: THE BEST THERMAL COMFORT

SEAMLESS TECHNOLOGY

"Seamless" knitting machines are the result of a technological evolution of circular hosiery knitting machines, which has been extended to other textile segments, particularly in outdoor and technical clothing.

The benefits of "seamless" clothing are the absence of stitching on the garments and the possibility of changing the weaving tensions. No stitching allows extremely comfortable garments to be created since, even if they are very close-fitting, there is no uncomfortable stitching in contact with the skin. Varying the weaving type, on the other hand, allows areas with differentiated compression and/or breathability to be created, with incredible benefits in terms of both technical performance and comfort.

This particular type of processing also has a positive impact on processing times and therefore reduces energy consumption (lower Carbon Footprint).

DRYARN®

PES	DRYARN	100
WOOL	PES	80

TPU MEMBRANE

A 2-layer fabric Outer layer in 100% recycled polyester canvas, excellent resistance to pilling and abrasion, manufactured using a "naturally" elastic polyester yarn on the weave. On the inside, there is a high-performance and extremely waterproof and breathable hydrophilic membrane. On the outside, the fabric is treated with a long-lasting water-repellent finish (DWR) that is sustainable because it is PFC-free.

An ideal fabric for nautical clothing. The water slides on the surface without impregnating it, while the water vapour produced during physical activity is channelled towards the outside through the membrane, keeping the body in optimal conditions during sporting activities. It maintains its high technical performance even in extreme conditions.

TECNOSTRETCH

The Tecnostretch line created by Pontetorto is the response to the market need for fabrics with a highly technical appearance, high elasticity and a high thermal insulation coefficient.

It is a jersey fabric formed of a smooth and abrasion-resistant outer side, with a highly technical look and a fleece that retains heat on the inside. An elastomeric fibre between the two layers makes the fabric extremely comfortable and ensures a perfect fit. The ideal combination of the fabric density and the thickness of the fleece creates an incredibly lightweight, soft and breathable fabric that has a high thermal power and is extremely resistant to wear and tear, as well as being easy-care and quick-drying.

The Recycled Technopile line created by Pontetorto uses polyester fibres, obtained by recycling PET bottles discarded on the beach or at the garbage dump to manufacture technical fleeces with various weaves.

TECHNO PIQUÉ

TECHNICAL AND LIGHTWEIGHT

SLAM has used its experience and research to create TECHNO PIQUÉ, an extremely lightweight and comfortable piqué fabric made from a polyamide yarn combined with an elastomer yarn. This fabric is particularly suitable for all sporting activities, as it is lightweight and cool and extremely elastic. The honeycomb weave increases its natural breathability. A specific treatment resistant to repeated washes makes it antibacterial and resistant to ultraviolet rays, with UPF 50+.

Techno piqué is easy-care and quick-drying, giving the body a pleasant sensation of coolness and comfort during intense physical activity in any environment, particularly outdoors.

DECK

collection

The DECK collection comprises a range of simple garments designed to protect the environment, thanks to the use of recycled and organic materials.

Jackets, t-shirts, polo shirts, shorts and pants with the unusual detail of a minimalist logo, to allow the best possible personalisation by the consumer.

This collection forms the basis for the project to support the staff of Emirates Team New Zealand, to help them in the goal of raising the Auld Mug above their heads once again.

MARINE LIFESTYLE

collection

Garments with a marine inspiration, but designed for everyday use, both on the quay and in the city. We use materials like Tactel and Lycra to make our customers' lives extraordinary. The introduction of a logo capsule has further enhanced the rebranding process started two seasons ago.

TACTEL

INNOVATIVE NYLON

The name Tactel derives from "tacto", the Latin word for "touch". This fabric is a special type of nylon manufactured for the first time in 1935 at the DuPont laboratories. It is a synthetic fibre with exceptional performance.

Its main characteristics are:

- highly elastic
- high resistance to wear
- easy to dye
- high colour solidity
- easy-care
- does not shrink with repeated washes
- quick-drying
- no ironing
- lightweight
- resistant to moths
- assists evaporation of sweat without absorbing it

Despite being a synthetic fibre, the unusual characteristics of Tactel® make it a valid alternative to cotton, as it dries eight times more rapidly and is three times more resistant, despite being soft and lightweight.

Dyeing of Tactel® is also sustainable, as it does not require bleaching or high temperatures.

TESSUTO 3-STRATI - 3-LAYERED FABRIC

La costruzione 3-layers è composta da una struttura formata da 3 strati sovrapposti. Una membrana traspirante impermeabile si accoppia ad un tessuto tecnico ad alte prestazioni e a una fodera interna.

Three layers of fabric are joined together to form 3-layered construction. The breathable, waterproof membrane is bonded to an high-performance technical fabric and to a lining.

TESSUTO 2-STRATI - 2-LAYERED FABRIC

Due differenti strati di tessuto sono accoppiati insieme per creare una costruzione 2-layers.

Two different layers of fabric are joined together to form 2-layered construction.

CUCITURE TERMONASTRATE THERMO TAPING

L'applicazione a caldo di uno speciale nastro sul retro del tessuto offre protezione totale dall'acqua lungo le cuciture.

The heat application of a special backing tape onto fabric offers total protection against water penetration along garment seams.

IMPERMEABILE - WATERPROOF

La resistenza all'acqua viene espressa in millimetri, che rappresentano l'altezza della colonna d'acqua a cui il tessuto è in grado di resistere prima di lasciar passare il liquido.

Waterproofing is expressed in millimetres which represents the height of the column of water the fabric is able to withstand before allowing liquid through.

RESISTENTE ALL'ACQUA - WATER RESISTANT

Tessuto resistente all'acqua grazie ad uno speciale trattamento di spalmatura.

Fabric that is water repellent thanks to a special coating.

IDROREPELENTE DUREVOLE DURABLE WATER REPELLENT

Il tessuto riceve un trattamento chimico che gli conferisce una superficiale repellenza all'acqua che dura nel tempo.

The fabric receives a chemical treatment which gives its surface long lasting water resistance.

IDROREPELENTE- WATER REPELLENT

Materiale che, grazie alla sua costruzione o trattamento, impedisce alle gocce d'acqua di penetrare all'interno del tessuto.

Thanks to its composition or treatment, this fabric does not absorb water.

TRASPIRABILITÀ - BREATHABLE

Tessuto capace di assorbire il sudore e di facilitarne la naturale evaporazione veicolandolo verso l'esterno.

Fabric that absorbs perspiration and allows its natural evaporation by conveying it to the outside.

ANTIVENTO - WINDPROOF

Trattamento di laminatura o spalmatura che rende il tessuto resistente al vento.

Lamination or coating treatment which makes the fabric windproof.

ELASTICO IN 4 DIREZIONI - 4-WAY STRETCH

L'estrema elasticità del tessuto dona migliore comfort accompagnando ogni movimento.

The fabric is highly stretchable and ensures maximum comfort naturally follows body movements.

TESSUTO ELASTICIZZATO - STRETCH

L'elasticità del tessuto dona maggiore comfort e accompagna ogni tuo movimento.

The fabric is stretchable to ensure comfortability and follows body moves.

GRAFENE - GRAPHENE

Il Grafene ha proprietà antibatteriche, antistatiche e migliora la microcircolazione. Le prestazioni di isolamento termico del Grafene sono paragonabili a quelle della piuma. Può essere lavato ed è inodore.

Graphene has antibacterial and antistatic properties and actually improves the human microcirculation. The thermal insulation performance of graphene is comparable with duck down. Washable and odourless.

TERMOREGOLAZIONE - THERMOREGULATION

La termoregolazione è la capacità di isolamento di un capo, cioè la proprietà di mantenere costante la temperatura del corpo in condizioni esterne di alta o bassa temperatura. L'elevato grado di termoregolazione permette di limitare il numero dei capi da indossare, migliorando la libertà di movimento.

Thermoregulation is the ability to maintain a constant temperature despite of environmental changing conditions. The high thermoregulation effect means you can reduce the number of garments to wear, in turn assuring greater comfort.

TESSUTO SOSTENIBILE - SUSTAINABLE FABRIC

Composto da fibre ecologiche pensate e lavorate secondo criteri di produzione eco sostenibili.

Made of ecological fibres designed and processed according to eco-sustainable production criteria.

RICICLATO - RECYCLED

Capo realizzato tutto o in parte con materiali riciclati.

Garment entirely or partially made of recycled materials.

BIODEGRADABLE

BIODEGRADABILE - BIODEGRADABLE

Speciale combinazione di fibre 100% naturali, biodegradabili, unite ad un filamento continuo in 100% poliestere riciclato che non rilascia microplastiche dannose.

Special combination of 100% natural fibres, biodegradable with 100% recycle polyester filament that releases no dangerous micro plastics.

APS

APS - AWEX PROTECTION SYSTEM

AWEX (by RES) è un tessuto con filato d'argento che, grazie ad una reazione fisica, crea una barriera alle onde elettromagnetiche.

AWEX (by RES) is a silver yarn fabric which, thanks to physical reaction, creates a barrier to electromagnetic waves.

UV PROTECTION

PROTEZIONE RAGGI UV - ANTI-UV

La protezione anti-UV si ottiene grazie alla speciale costruzione del tessuto o all'utilizzo di trattamenti specifici.

A fabric provides UV PROTECTION when it has UPF 30+ or UPF 50+ rating, which means it effectively blocks solar ultraviolet radiation from reaching the skin. The UV protection is obtained thanks to the special construction of the fabric or to a special treatment.

BACTERIOSTATIC

BATTERIOSTATICO - BACTERIOSTATIC

Il tessuto batteriostatico impedisce il proliferare dei batteri mantenendo inalterato il pH fisiologico della pelle, evitando la formazione di allergie, dermatiti ed altri disturbi cutanei. Si ottiene attraverso il trattamento specifico.

Bacteriostatic fabric acts as a barrier to inhibit the growth and reproduction of bacteria; it also maintains the skin's natural PH balance, providing protection from allergies, dermatitis and other skin complaints. It is obtained through specific treatment.

QUICK DRY

RAPIDA ASCIUGATURA - QUICK DRY

Particolare struttura o trattamento che facilita la veloce evaporazione dell'acqua e quindi una rapida asciugatura del capo appeso.

Particular structure or treatment which facilitates the quick evaporation of the water and then a rapid drying of the hung garment.

ANTIPILLING

ANTIPILLING

Trattamento che riduce la formazione di pelucchi e palline.

Pilling protection treatment.

NO IRON

ANTI PIEGA - NO IRON

Tessuto che non necessita di stiratura.

Fabric that does not need ironing.

PACKABLE

RIPIEGABILE - PACKABLE

Sistema richiudibile che permette di ripiegare l'articolo in una tasca.

Packable system for stowing away the item in a pocket.

LIGHT WEIGHT

LEGGERO - LIGHT WEIGHT

Peso leggero ma che mantiene alte le caratteristiche tecniche.

Light weight item that keeps high performances.

EASY CARE

FACILE MANUTENZIONE - EASY CARE

Questo capo permette una facile manutenzione in termini di lavaggio e stiro, il normale procedimento di cura e conservazione è facilitato dalle caratteristiche tecniche del tessuto.

This garment allows low maintenance in terms of washing and ironing, the normal process of care and conservation is facilitated by technical fabric characteristics.

COMFORTABLE

CONFORTEVOLE - COMFORTABLE

Capo realizzato rispettando i principali canoni di comfort: dalla scelta del tessuto allo studio dell'ergonomia del corpo umano.

A garment made to comply with the principal standards of comfort, from the choice of fabric to the study of the human body's ergonomics.

ERGONOMIC

ERGONOMICO - ERGONOMIC

Taglio e struttura appositamente concepiti per seguire e facilitare i movimenti del corpo.

These garments have a special cut and shape to follow and facilitate body movements.

FLATLOCK STITCHING

CUCITURE PIATTE - FLATLOCK STITCHING

Cuciture piatte per una migliore vestibilità e che evitano il fastidio sulla pelle.

Flat seams for a better fit and to avoid discomfort on the skin.

REFLECTIVE

RIFLETTENTE - REFLECTIVE

Dettagli e stampe in materiali riflettenti per una maggiore visibilità notturna.

Details and prints made of reflective materials for an higher night visibility.

ANTI-SLIP

ANTI SCIVOLO - ANTI-SLIP

Particolari tagli eseguiti sotto la suola di gomma che conferiscono presa sul bagnato.

Special razor cut tread on outsole that gives more grip on wet surfaces.

NO MARKING

ANTI SEGNO - NO MARKING

Gomma della suola che non lascia segni.

No marking rubber for outsole.
